Tips for Making Your
Virtual Meeting
More Professional

Virtual meetings are becoming the most efficient way to hold meetings in business today. They can be used with colleagues for business meetings, trainings, presentations or even employee interactions.

Look at camera, not the screen

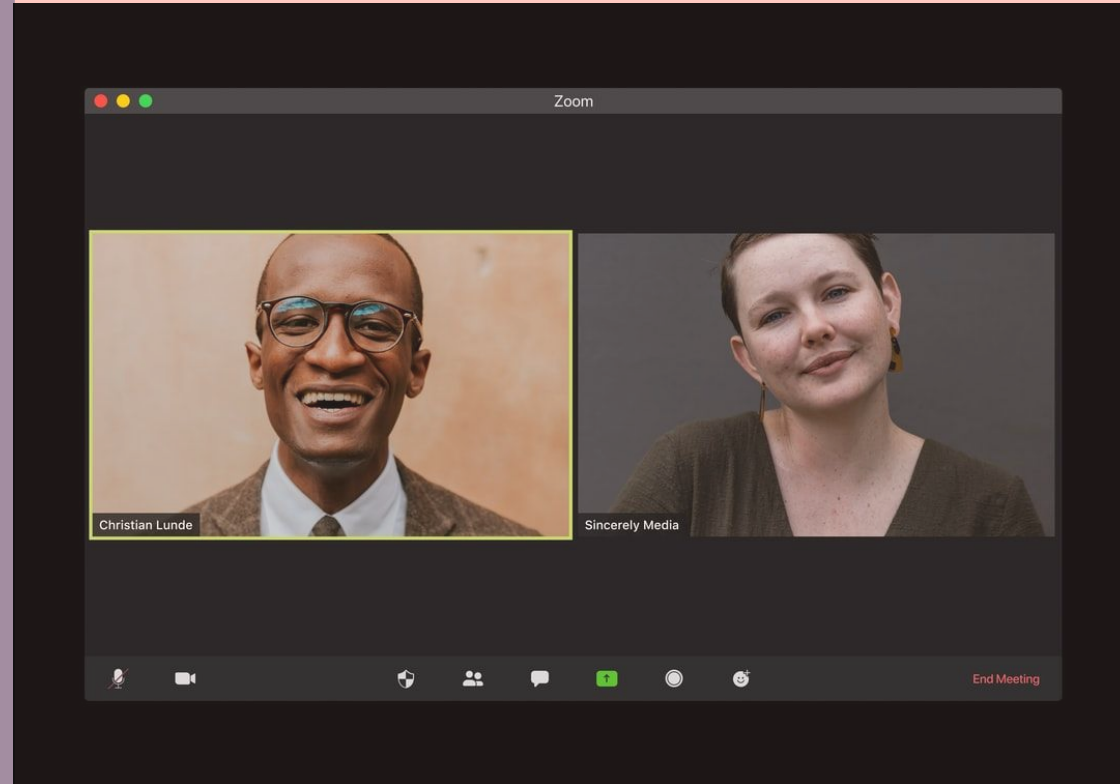

This will make it seem like you are looking directly at the person, which will create a stronger connection.

Raise your webcam to eye-level

Put a box under your laptop. This will create a more natural setting, as if you were both sitting across from each other at the same table.

Create good lighting

Having two LED desk lamps with adjustable intensity on either side of your webcam directed toward your face is ideal. One large lamp can also work.
